

AYAN NAYYER

Bengaluru, India | +91 79799 78998 | ayannayyer@gmail.com | [LinkedIn](#) | [GitHub](#) | ayannayyer.tech

SUMMARY

Software engineer working on backend services and full-stack web apps with FastAPI, Angular, React, Kafka, and Docker. Most of my work is around event-driven microservices, config-driven reporting and dashboard systems with caching, and migrating workflows end-to-end. On the side, I've built a production e-commerce platform with server-validated payments and concurrency-safe coupon redemption. BS in Data Science & Programming from IIT Madras.

EXPERIENCE

Software Developer, Alucor

Bengaluru, India · Oct 2025 to Present

FastAPI · Angular · TypeScript · Kafka · Docker · Python · Camunda · AG Grid

- Built the **Form Service backend** in FastAPI and integrated it with the **Eidos form-rendering library**. Now in production as the form layer for enterprise SaaS workflows across the platform.
- Built a config-driven **Reporting Service** on top of DQS event streams, rendered to **AG Grid** on the frontend. A configurable cache (default 15 min) keeps reports loading near-instantly. Live in production powering reports across the platform.
- Built **Dashboard APIs** that aggregate counts, summaries, and percentages from DQS for the frontend dashboards. **3 dashboards in production right now, with more coming.**
- Shipped the **KSA Immigration workflow** end to end (frontend and backend) with **Kafka** events and full integration across forms, reporting, and dashboards.
- Led migration of **Admin Workflows** (Employee Self-Service, Document Management) to **Capella**, with full frontend and backend integration across Camunda, BFF, DQS, DMS, Reporting, and Form Service.

AI Intern, Tolgee

Remote · Jun to Jul 2025

OpenAI · Anthropic Claude · React · CLI Tooling

- Worked on code migration and localization for React projects using Tolgee's AI Migrator, hooking up both **OpenAI and Anthropic Claude** pipelines.
- Built prompt and CLI workflows that automate inline review comments and key extraction. Fixed a bunch of edge cases around LLM behavior and codegen.

Data Analyst Intern, Controlytics Automation

Remote · May 2025

React · Flask · SQL Server · Data Pipelines

- Upgraded the NFM Dashboard frontend in React/CSS and built data pipelines plus Flask APIs against SQL Server, with interactive search, filters, and reporting features on top.

PROJECTS

Shanay, Production E-commerce Platform (Founder/Builder). Built a live e-commerce site for a handcrafted-goods brand. The server recomputes the order total on every Razorpay order and verifies the HMAC signature so the client can never forge a price. Coupon redemption is race-condition-safe (async-mutex with atomic file writes), so the same code can't be used twice even under concurrent traffic. Auth runs on Supabase (email + Google OAuth), order emails go out through Resend, and the API has rate limits and an origin allowlist. *Stack: React 19, TypeScript, Vite, Tailwind, Framer Motion, Node.js/Express, Supabase, Razorpay, Resend, Vercel.*

Decentralized Escrow & Service Marketplace. A dApp for secure client-provider transactions with on-chain fund management on Ethereum and Hedera. *Stack: Solidity, React, Ethers.js.*

AI-Powered Learning Platform. Full-stack web app with AI insights, NLP-based video summarization, and a chatbot. *Stack: Vue.js, Flask, NLP, OpenAI.*

PlayIT, Music Streaming App. Music streaming app with Redis-cached APIs for low-latency playback. *Stack: Vue.js, Flask, Redis.*

Karwaan-e-Swarozgar (NGO Website). Built and maintain the official NGO site with a mobile-first design and contact/donation forms. Ongoing project, associated with Shanay. *Stack: React, CSS, Vercel.*

SKILLS

Languages: Python, TypeScript, JavaScript, Java, SQL, R, Solidity

Backend: FastAPI, Node.js/Express, Flask, REST APIs, Kafka (event-driven), JWT/OAuth, Camunda (workflow), BFF pattern

Frontend: React, Angular, Vue.js, Vite, Tailwind, Framer Motion, AG Grid, HTML/CSS

Data & Infra: SQL Server, Postgres (Supabase), Redis, Docker, Vercel, Git, caching strategies

AI / ML: Machine Learning, NLP, GenAI, OpenAI & Anthropic Claude API integration, Statistical Modeling

Other: Razorpay (payments + HMAC verification), Resend (transactional email), Solidity (Ethereum/Hedera dApps)

EDUCATION

BS, Data Science & Programming, Indian Institute of Technology, Madras (Minor: Economics & Finance)

2025 · CGPA 8.5

CERTIFICATIONS & ACHIEVEMENTS

- Certifications:** Google Data Analytics Professional · HackerRank SQL (Advanced) · NPTEL Data Mining · Coursera Web3 & Blockchain
- Leadership & Achievements:** Member, Student Placement Council, IIT Madras BS Degree · Hosted a 1000+ attendee event at Paradox (annual fest) · International Rank 61, English Olympiad (SOF India)
